

VORTEX ROTARY ATOMISER

PRODUCT AIM

To provide a completely mobile solution to localised odour & dust issues.

TYPICAL APPLICATIONS

- Remediation
- Landfill sites
- Composting Sites
- Water Treatment
- Waste transfer stations

HOW IT WORKS

The system works most efficiently with the ODR range of additives, non-toxic odour neutralizers supplied by Air Spectrum. The correct amount of ODR (dependant on which range) is put directly into the 1125L bowser and water from a clean, potable supply is then added to top up. The Rotary Atomiser Mobile operates with a simple on/off switch and produces 20m of finely atomised mist, allowing close targeting of odours. Delivering an effective mobile solution to dust and odour problems.

The ODR range is produced using bio-degradable essential oils to effectively neutralise odour particles, rather than simply masking the odour.

Please see the ODR additive product datasheet for more information. (available on request)

AVAILABLE WITH OR WITHOUT A GENERATOR

AVAILABLE TO PURCHASE OR HIRE

FEATURES

- 1125 Bowser tank – provides a full days operation before refilling
- 20m dispersion coverage – delivering accurate localised treatment
- Highly mobile, with integral trailer
